# Note: Where Your W&B Runs Go

COMP 395 – Deep Learning · Lab 3: Sonar

## Who this is for

You are a member of the class W&B organization `jwalsh2-occidental-college`. Stay in it: that is how you see the runs I share with the class. But your **own** lab runs should go to your **personal** W&B account, not the class organization.

## Why this happens

When you belong to a W&B team, that team can become your *default* destination. Any `wandb.init()` without an explicit `entity=` then logs into the class organization instead of your account.

## Check first

When a script starts a run, it prints a link. Look at it:

```
wandb.ai/<your-username>/comp395-lab3-sonar/...              correct
wandb.ai/jwalsh2-occidental-college/comp395-lab3-sonar/...   wrong
```

If your link shows your username, you are done. Otherwise, use **one** of the fixes below.

## Fixes (pick one)

1. **Update the two lab scripts.** The current template versions of `linear_baseline_wandb.py` and `sonar_mlp.py` send runs to your personal account automatically, using
   `wandb.init(entity=personal_entity(), ...)`.
   Replace your `linear_baseline_wandb.py` with the new version. In `sonar_mlp.py`, keep your own experiment code and copy in only the `personal_entity()` function and the `entity=` line.
2. **Set your default.** On `wandb.ai`, open your User Settings and set your default team to your **personal** account. You stay in the class organization; only where new runs go changes.
3. **Set it for this session.** Before running anything:

   ```
   export WANDB_ENTITY=<your-username>        # macOS / Linux terminal
   ```

   In Colab, run this in a cell first:

   ```
   import os
   os.environ["WANDB_ENTITY"] = "<your-username>"
   ```

## In `comparison.py`

When you write your own `wandb.init(...)` for the Random Forest, pass `entity=personal_entity()` (import it from `sonar_mlp`) so that run goes to your account too.

## Runs already logged to the class organization

Re-run your experiments after fixing. Each one takes well under a minute. The runs in your personal project are the ones you link in your report. Your report's W&B link should look like

`https://wandb.ai/<your-username>/comp395-lab3-sonar`

with the project set to **Public**.

Questions? Ask in class or email `jwalsh2@oxy.edu`.
